

Exercice n°1

| | Type de filtre (L.P., H.P., B.P., N.) | A_{min} | A_{min} (dB) | A_{max} | A_{max} (dB) | f_p (kHz) | f_a (kHz) | Se |
|----------|--|-----------|-------------------|------------|-------------------|--------------------------------|-------------------------------|-------------------------------|
| Filtre 1 | L.P. | 100 | 40 dB | 1,412 | 3 dB | 50 | 100 | $\frac{f_p}{f_a} = 0,5$ (L.P) |
| Filtre 2 | L.P. | 200 | 46 dB | $\sqrt{2}$ | 3 dB | 8 | $\frac{f_p}{f_a} = 40$ (L.P) | 0,2 |
| Filtre 3 | H.P. | 1000 | 60 dB | 1,122 | 1 dB | $\frac{f_a}{f_p} = 2$ (H.P) | 0,5 | 25% |
| Filtre 4 | B.P. | 1585 | 24 dB | 2 | 6 dB | $f_{p-} = 12$ $f_{p+} = 15$ | $f_{a-} = 4$ $f_{a+} = 45$ | (B.P) 7,32% |

$$A_{min} = 10^{A_{min}(dB)/20}; A_{max} = 10^{A_{max}(dB)/20}$$

$$A_{min}(dB) = 20 \log(A_{min}); A_{max}(dB) = 20 \log(A_{max})$$

$$Se_{(rect)} = \frac{f_{p+} - f_{p-}}{f_{a+} - f_{a-}}$$
